

Sustainable Fuels Consultant required

London-based
2-5 years relevant work experience

About us

Since 1997 E4tech has been supporting the global transition to sustainable energy and resources. We work with companies, governments and investors to guide strategy, policy and investment decisions locally and globally. Our strong track record in providing strategic business and policy advice is backed up by deep technical knowledge. E4tech's clients call on us for strategy development and business planning, market and competitor analysis, due diligence support, policy analysis and development.

As the climate change agenda and global interest in the energy transition and a more renewable and circular economy escalate, we are seeing an unprecedented increase in requests for help from organisations trying to understand how to play their part.

E4tech operates from offices in London, UK and Lausanne, Switzerland and we foster a flexible, inclusive and agile working environment, using technology to minimise our travel and to improve the working experience of our teams.

Further information about E4tech is available at www.e4tech.com

The role

Continued growth in our core areas of Bioenergy & Biochemicals; Fuel Cells & Hydrogen; Low Carbon Transport; System Transition Enablers; Energy Innovation & Policy, and Sustainability & Resources means that we plan to expand our London team.

In particular, we are looking to reinforce our capabilities in sustainable fuels, including biofuels, e-fuels and hydrogen, and recycled carbon fuels, across both transportation and stationary applications. The successful candidate will participate in a wide variety of project work in this area, and will also have the opportunity to contribute to projects in our other sectors.

Your responsibilities and activities will primarily include:

- Participating in and managing projects on all aspects of sustainable fuels, including supply chain technology and economics, business models, industry supply chains and status, investor support including due diligence, sustainability, and policy support;
- Participating in or leading proposal writing;

- Identifying business leads and prospects;
- Communicating with clients on project and business development matters;
- Contributing to the development and implementation of E4tech's company-wide and sector strategies, including thought leadership on the evolution of sustainable fuels;
- Contributing to internal and external communication activities, including participation in conferences.

There will be opportunities to continue to develop and apply strategy, project management, business development and team leadership skills. As part of the E4tech team, consultants also participate in the development of the whole firm.

You will join a high calibre team working from our London office, but there will be frequent interaction with our Swiss office team and with clients at a range of locations in the UK and abroad, though most of our work is office, not client-based.

We offer a collegiate working culture, a competitive salary, and a diverse and interesting environment at the cutting edge of sustainable energy and resources. Salary and grade will be based upon experience.

About you

We are looking for a consultant with a strong commitment to client satisfaction, who enjoys problem solving in a complex environment. You must also have enthusiasm, initiative, and a manifest interest in energy and sustainability.

Suitable candidates will have an excellent postgraduate degree in a subject relevant to the core areas listed above, and prior experience gained in a consulting or industry context. Specific expertise in one or more of the following areas is sought: (advanced) biofuels, e-fuels and recycled carbon fuels, covering aspects related to technologies, markets and policy, and supply chains. Techno-economic, supply chain and market analysis expertise is particularly valuable. Life cycle assessment (LCA) skills and experience would be a plus. Candidates will ideally have an aptitude to work across other areas of sustainable energy and chemicals. All candidates must have the ability to communicate clearly and concisely, and enjoy problem solving. You must also have enthusiasm, initiative, and a strong interest in energy and environmental issues. Fluent English is essential and other languages would be an advantage.

E4tech is an equal opportunity employer and strongly values diversity within our team. It is not only our policy but successful practice to ensure that no job applicant or employee receives less favourable treatment because of gender, age, disability, marriage status, pregnancy or maternity, sexual orientation, race, religion or belief.

How to apply

To apply, please email your CV and a cover letter, explaining why you would like to join E4tech and what you would bring to this role, to jobsUK@e4tech.com. Please quote reference **[20UK04]**.

The deadline for applications is **10am GMT on Monday 01 February 2021**.

We will only consider applications from candidates who demonstrate they have the right to work in the UK (e.g. UK citizens; holders of a valid UK work visa; eligible for a UK work visa). **Please make this clear in your application.**

Please note that E4tech will not consider candidates from recruitment agencies.
